Public Building for Boskovice

Public Building for BosKovice

The new building refers to a certain austere and calm feeling contained in the city and found out in some Boskovice black-and-white historical photos. This unfinished figure in classic formal terms will appear as a primitive piece beached in the middle of the village.

The simple structure of dark warm pigmented concrete frees up the ground level while maintaining the continuity of the existing urban texture. This public place should become a market open to its surroundings.

The first level contains the apartments and scout program. Its soft wooden interior will contrast with the hard exterior of concrete and aluminum. A second floor - accessible from the ground floor and the first-level - hides a wild garden, a piece of stolen natural landscape taken from the environments of Boskovice.
